FCC MAIL ROOM

Dear F C C Commissioners

RE: 2 Way Radio Communication

FCC Docket 92-235

Having just received information concerning a proposed rule change by the F C C, which would reduce the power level and range of communication for County Government Communication, I feel empowered to make a few comments:

- 1: County Government operates on a very limited budget. Counties simply cannot afford to buy all new equipment.
- 2: This County has spent the past 6 years modernizing an old, antiquated system and during the past year my county has felt real satisfaction with its communication system.
- 3: It has been brought to my attention that at this time, the industry does not manufacture equipment capable of meeting the proposed regulations.
- 4: With no money in the budget, and no equipment available if there was money, where does that leave us?
- 5: With no radio communication County Employees, especially those working in isolated areas, are in jeopardy should a need to communicate arise. Needs range all the way from oil leaks on a machine and flat tires to any number of life threatening situations.
- 6: The radios are all important for cost saving measures due to the amount of communication necessary from the command center to the equipment operators in order for jobs to be kept moving on schedule.

Sincerely

Junior Huckaby
